

February 7, 2020

Dear Colleague,

We are excited to share with you, the launch of our new CareFlight app! The new app will serve as another resource for you as the provider to electronically request the helicopter for patient transport. The versatile app has many functions that will expedite mobilization of a helicopter for patient transport, increased transparency and expedited communication.

Utilization of the app allows for real time communication between the requestor and the CareFlight Communication Center through secure chat functioning. GPS Coordinates with pin drop function will mitigate duplicative communication about LZ location or movement.

The app is currently available on the Apple Store and Google Play Store. We have been working with Dispatch Centers across the region for placement of the desktop version for Dispatchers.

If you have any questions or would like to schedule a demo, please contact your Premier Health EMS Coordinator or myself.

Thank you for being a part of our continued mission of keeping safety and patients at the forefront of all that we do.

Stay safe,

Mandy Via, MSIHCM, BSN, RN, CEN, Paramedic
