## Training for Real World Responses

**COURSE DESCRIPTION:** This 4-hour training incorporates the “Above the Line/Below the Line” size-up system to train those arriving first on scene, if they can safely enter the HotZone. While not a certification course, First Responder Offensive covers basic chemical physical properties, and the Stay Alive Five equipment (SAFE) Kit (radiation pager, F and pH papers, temperature gun and LEL meter) to determine whether the responder can safely continue with recon or perform a rescue (Go/Get-Out).

**COURSE LENGTH:** 4 hour

### LEARNING OBJECTIVES:

- Provide training on transportation containers, for both highway and railway.
- Train First Responders on the HazMatIQ FROsmart Charts
- Provide training on the Stay Alive Five equipment (meters and reagent papers) that are required to incorporate this life saving system.
- Equip and train your responders to use the NIOSH Pocket Guide. Currently First Responders are trained only on the DOT Emergency Response Guidebook (ERG) that provides only limited information needed to make a “Go or No Go” decision.
